PROFILE

Software engineer writing code since 2019, with 3+ years of professional Python and Django experience building multi-role business platforms end to end: data models, APIs, frontend and production support. Built the university's mentoring platform alone and worked on the admissions exam platform used by 20,000 candidates. Ships and maintains four of his own apps on the App Store. Background in economics and sales, with a real interest in how business software handles workflows, stock and money.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C, C++
Backend: Django, Django REST Framework, Django Channels, REST APIs, PostgreSQL, Redis
Frontend & mobile: React, Next.js, React Native, Expo, Tailwind CSS
Tooling: Git, GitHub, Docker, Linux, automated testing (pytest), CI/CD
Integrations: Microsoft SSO, Mapbox, RevenueCat, Replicate, Cloudinary

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Vanguard Center, UM6P
May 2023 – Present

- **AstraConnect** (part of the department's holon.ma platforms): built the academic mentoring platform alone from functional specifications. Now used by about 1,000 students and mentors. Designed the DRF APIs, PostgreSQL data models, Next.js interfaces and permissions for four user roles.
- Built one-to-one and group session scheduling with recurring availability, proposals, rescheduling and conflict detection. Added QR and manual attendance with expiring check-in tokens, duplicate prevention and audit trails.
- Implemented academic workflows for programs, cohorts, courses, enrollments and mentor workloads. Integrated Microsoft SSO and the shared authentication service used by all the department's platforms.
- **SASE admissions exam platform** (sase-quiz.um6p.ma): built learner, mentor and admin assessment interfaces, timed quizzes, attempts, autosave and reviews. Serves about 1,000 regular users and handled 20,000 candidates during the 2026 admissions testing week, with candidates booking slots in batches to keep server load under control. Fixed production issues affecting submissions, question loading and session expiry.
- Built intranet features for the mechatronics department, including a browser-based code editor and terminal, and the interface for a Python-to-C++/Fortran transpiler.
- Mentored junior frontend developers and led frontend work across departments.

Independent Apps — Developer
Personal projects

- Four apps live on the App Store, each built end to end from backend to mobile release: **Ryddar** (ryddar.com), **DecorifAI** (decorifai.com), **CartoonifAI** (cartoonifai.com) and **Mood to Drink** (App Store).
- Designed a shared Django backend with centralized authentication and reusable infrastructure, keeping each product's domain logic in its own Django apps.
- **Ryddar:** motorcycle route planning and rider safety with Mapbox, route-level weather scoring, risky-segment visualization, group rides, community spots and hazard reporting.
- **DecorifAI:** AI interior design and virtual staging with Replicate and Cloudinary, using asynchronous generation, failure handling, automatic credit refunds and asset exports.
- **CartoonifAI:** AI photo-to-cartoon and anime app. **Mood to Drink:** mood-based drink suggestion app.
- Integrated RevenueCat subscriptions and consumable purchases. Built the Next.js marketing websites.

Freelance Web Developer
2020

- Built landing pages for Petrostar and for a digital marketing agency.

Sales Intern — Nestlé
Jan 2017 – Apr 2017

- Worked in field sales and was responsible for managing stock.

EDUCATION

1337 Coding School (42 Network) — Architect in Digital Technologies Oct 2019 – Nov 2023
Ibn Zohr University — Bachelor's Degree in Economics Oct 2013 – Jul 2016
